

Technical Bulletin #16**Nov 28, 2002****Faxing of Paint Formulas**

Endura's main goal for our color formulas is reproducibility and accuracy. Currently Endura runs a computer program for formulas that only has 4 decimal places (e.g. 1.0000 Kg). For this reason we are no longer able to accept 4L or gallon formulas matched at distributors. The formulas will have to be in quart amounts for Endura to correctly enter the formula and achieve the same color.
