

Technical Bulletin #30**May 17, 2005**Endura EP-PA Primer

Endura EP-PA Primer has been significantly improved. This primer no longer requires an induction time and now has a slightly faster drying time; the EP-PA Primer may now be topcoated sooner. Other improvements made to the product mean increased shelf stability and decreased settling in the can. Endura is very pleased with the improvements made to EP-PA Primer. It meets or exceeds all previous performance criteria and offers increased value to end users. Revised MSDS and data sheet are attached and available via the website.
