

**Technical Bulletin #33****Aug 31, 2007****Introduction of a new tinter TB 07**

Endura Manufacturing has researched and developed a new tintbase to expand the EX-2C tinting line. This tintbase is a lead free yellow with hiding power that is much better than TB05, almost approaching the hiding power of TB15. TB07 is not a direct offset for TB05 or TB15. The new yellow tintbase will allow us to obtain an economical, better hiding, lead-free match and deliver a better end product to our customers. Endura is very pleased with this addition and have already started using this new tintbase. We recommend that you add this tintbase to your tinting system for use in new colors.
