

**Technical Bulletin #35****April 24, 2008****Old Color Chips**

In the interest of color accuracy, we are asking all distributors to destroy or return to Endura all color chips older than 8 years old. Over the years Endura has implemented a number of improvements in our tintbases and in our quality control procedures. This has had an effect on the color accuracy of old chips. Another factor is the effect of age and UV degradation on those same color chips. The end result will be a leaner but more accurate selection of colors for all customers.
