
Technical Bulletin #54

TB 30 – Viscosity change

Starting April 11, 2017...the viscosity of the TB 30 will require an adjustment

ALL existing TB 30 at your location need to be used at 80% (with 20% Clear 111)

Please add the 20% Clear 111 to any stock of TB30 to ensure you are using the correct amount for the Endura formulas on the Endura Color Disk.

All new orders for TB30 from Endura Paint will be the lower viscosity color. The Endura Color disk is updated and all formulas reflect this new lower viscosity TB-30

This new lower viscosity TB-30 will aid in keeping colors that use TB30 in a viscosity range closer to other EX-2C Colors.

For any questions please contact your Endura representative or the Endura Color Lab @ **1-800-661-9930**.
