

Non-Skid Additive:

This bulletin is to inform you that the Non Skid Additive will only be available in one particle size, 20 Micron. This corresponds to the previous coarse grade.

Due to low sales demand, and the fact that the difference in particle size between the two previous grades was negligible it has been decided to eliminate one of the grades.

The Technical data sheet has been revised and will be put on the website concurrent with this notice. The new Non Skid Additive Technical Data sheet will have no reference to grade type (i.e. Coarse or Medium), it will only be Non Skid Additive.

For any questions please call your Endura Representative at 1-800-661-9930.
