

Alodine Product Update

Effective immediately, Alodine (FAD0003) will no longer be sold or distributed by Endura due to health and environmental concerns of the product. This is in line with Endura manufacturing's ongoing commitment to Health Safety and Environmental issues.

In cases where a product is required to provide a pre-bond adhesion promotion of the primer topcoat systems MetaLink is recommended. MetaLink is a waterborne, chromate free adhesion promoter which is available in clear and transparent orange. It consists of three components sold in quart and gallon kits.

For Further information on MetaLink and its application consult our Technical data sheets on our website or please call your Endura Representative at 1-800-661-9930.
