<p>Is this a fleet color that will be bought repeatedly or just a "one-time" deal? _____</p> <p>If it is a metallic/pearl color, do you want it matched as base/clear in O.E.M. fashion or a single stage? _____</p> <p>Most new pearl/metallic colors need to be base/clear for a "acceptable match". _____</p> <p>Single stage and to some degree base/clear colors are application dependent and will change depending on the applicator/viscosity/and air pressure used. We recommend using conventional spray at 40-45 psi. _____</p> <p>Our paint colors are made to match in daylight conditions and may not match under other lights sources. _____</p> <p>Note: Solid colors may require 24 hours to match. Pearls, medium-lo-no gloss and some metallics may take up to 5 working days to match. O.E.M. touch-ups are not recommended – only complete paint jobs.</p> <p>Final Spectrophotometer Delta E (if applicable) = _____</p> <p>Matched By: _____</p>
