

Date: July 18, 2010

To our valued customers and distributors:

The new formula of White 120 HH (FUA0129) is a product that has been designed so that the painter can spray 1 coat on an interior and leave it while still getting good hiding and gloss retention.

The product can be sprayed without reducing using airless equipment. Spraying 4 mils wet will give you 2.5 mils dry.

For spraying in other applications reducing is recommended with EX-2C Thinner to get to a viscosity of 13-14 seconds. Then 2.5 mils dry can be achieved in 2 medium coats.

Thank you,  
Technical Department
